Profile

Engineering student in IT Security and Digital Trust at ENSIASD, passionate about offensive and defensive cybersecurity. Experience in secure development, vulnerability analysis, application security, and AI-based anomaly detection. Seeking an internship in penetration testing, SOC, or application security.

Experience

- Frontend Developer Intern** Jul. 2025 – Sep. 2025
ReeWayy Remote, France
 - Secure development of the SuppWayy B2B platform (Next.js, Tailwind CSS), applying input validation, XSS/CSRF protection, and OWASP best practices.
 - Secure API integration with backend services in collaboration with an international team on GitHub.
- Full Stack Engineer Intern** Jul. 2025 – Aug. 2025
DevForYou Agadir, Morocco
 - Development of PhytoVigil (Web, Mobile, AI) using React Native, FastAPI, and PostgreSQL, including authentication, access control, and API endpoint security.
 - Implementation of a CNN model for plant disease detection achieving 98% precision and 97% recall, with a secured data processing pipeline.

Education

- National School of Artificial Intelligence and Data Science (ENSIASD)** 2024 – Present
Engineering Degree: IT Security & Digital Trust Taroudant, Morocco
- Polydisciplinary Faculty of Taroudant** 2022 – 2024
University Diploma: Computer Engineering Taroudant, Morocco
- Youssef Ibn Tachfin High School** 2020 – 2022
Baccalaureate: Computer Maintenance and Networks Agadir, Morocco

Projects

- Log Anomaly Detection System (SOC)** 2025
Python, Scikit-learn, Log Analysis
 - Designed an ML-based anomaly detection system on a dataset of 5M system and network log entries, achieving precision of 0.79 and recall of 0.92 in a SOC environment.
- ModStrike: Modbus/ICS Security Tool** 2025
Python, PyQt6, PyModbus, PyQtGraph
 - Penetration testing tool for Modbus protocols covering 10 security modules: network scanning, implementation of 4 attack types, and assessment of 5 ICS/OT vulnerability classes.
 - Real-time traffic analysis engine with anomaly detection, configurable alerts, and report generation.
- AuditQuest: 2D ISO 27001 Audit Game** 2025
Phaser3, Colyseus, React, WebRTC, TypeScript
 - Development of a collaborative 2D game simulating an ISO 27001 audit, based on ISO 27002 controls, integrating evidence collection, compliance assessment, and risk analysis (probability $\times$ impact).

Skills

- Cybersecurity:** Web Security (XSS, CSRF, SQLi), Cryptography, Reverse Engineering, SAST/DAST, OWASP Top 10.
- SOC & Audit:** Log Analysis, Intrusion Detection, SIEM, Security Audit, ISO 27001, Active Directory.
- SIEM & Monitoring:** Splunk Fundamentals, Wazuh Fundamentals, IDS/IPS, Security Event Analysis.
- Networking:** TCP/IP, DNS, HTTP/HTTPS, Network Traffic Analysis, Network Security.
- OT/ICS Security:** SCADA, PLC, Modbus TCP/RTU, Industrial Control System Security Analysis.
- Programming:** Python, JavaScript, C, C++, PHP, SQL, Bash.
- Tools:** Linux, Wireshark, Burp Suite, Nmap, Metasploit, Git, Docker.
- AI & Data:** Machine Learning, Anomaly Detection, Data Mining, Data Analysis.

Languages

Arabic: Native | **French:** Fluent | **English:** Professional
